We perform studies for industrial minerals distribution systems with logistics costs in mind.

Our Services:

- Feasibility and Technical Studies for Distribution Networks
- Terminals for Coal, Cement, Lime, Frac Sand, Aggregates and other bulk products
- Evaluation for conversion of existing facilities for new bulk products
- Investigation of potential rail, river or ocean transportation systems
- Logistical analysis of industrial distribution
- Feasibility and technical studies for increasing market area for existing plants
- Technology comparisons of equipment tenders
- Conceptual through detailed design of the terminal and terminal equipment
- Modifications to existing systems to improve operation or a change in process
- Capital cost and operating cost estimates
- Logistical cost studies and overall project economics of alternatives

Some of our Projects:

We design systems that meet the specific needs of our clients storage facilities and conveying systems which are laid out to obtain optimal product flow and efficient dispatch.
